Ok, I answered my question myself.

After succeeding in charging the battery to 1%, I now see the battery indicator and the battery settings that no longer appears when removing the battery.

The BATT0.AML is definitely not for this Laptop, the EC contains only 8bit fields

Intel HD3000

If you have the nVidia model, an external monitor is not possible. The digital outputs are tied to the Nvidia card, VGA could work, but not tested.
