A bit late, but here it is. As already mentioned accelerated graphics will only work with HighSierra, for later releases you will need to replace some files.

I don't work with this Laptop, this is just for fun, so I can't say if there are any issues. I installed OpenCore Clover and the legacy mode (see screenshot).

Good luck.

The SSDT-CpuPm.aml is for the i7-2620M CPU, if you don't have that CPU generate your own SSDT
