

LoadImage failed - Unsupported & No Installer in Open Core Picker

Beitrag von „PizzaraGirl“ vom 15. November 2021, 19:53

good news, the zip you sent me, actually worked, but it panicked after loading a kernel i couldnt take an image due to my phone having no battery but it said "lilu kext" and got stuck for about a minute until it said: "please report this kernel panic to apple" or whatever. i'll add a screenshot if this happens again.
