

von Big Sur 11.6.1 auf Monterey bleibt bei diesem fehler stecken -in espanol -spanisch, ingles-english

Beitrag von „apfel-baum“ vom 20. November 2021, 22:10

if you use opencore, you have enable the "advise features" , to upgrade to monterey.

ok i take a look at your config

--

ok- first sight- your kext-order was broken, i don't know the version state of your current kexts- maybe make an update too. it seems to be that you own a amd-cpu

try the current updated config.plist

maybe it works , maybe there must be specific switches for your amd cpu set
