

Ozmosis migration to Opencore

Beitrag von „apfel-baum“ vom 28. November 2021, 13:56

you can use the added efi from the post before it is already opencore and should run with your board, and of course- there ist no need fpr an nvme-ssd to run osx-you can still use your s-ata or m-sata ,ssd, or even hdd , it's just an option for the "future-use" with your board, if you want.

i add an biospack with an order 1-3 to flash 😊

1th the unmodded current bios, 2nd the ubu-modded one

and 3rd the nvme-and others mod. 😊

greetz

edit i don't know what are the keyboard-layout currently were, so it's en-us, you have change it later in the efi -config.plist
