Ozmosis migration to Opencore

Beitrag von "apfel-baum" vom 28. November 2021, 14:24

i've already make the settings of the kext-order, maybe if you put more kext to the efi the order maybe changed, but atm it should run as it is- no need to rearrange , it's able to use and install monterey but it should be maybe recommend to make the usb-mapping before updating to big sur or monterey

greets

q:- As I understand it, I am not creating a new "OC" folder in the EFI partition?

a:- yes, you have not to create one- you use and transfer the efi-folder in post 4 "supergg12-EFI.zip" that i've added here in the thread
