Ozmosis migration to Opencore

Beitrag von „supergg12" vom 29. November 2021, 17:22

Hi Apfel-Baum,

Yesterday I installed 10.16.1 (Big Sur).

System loading is much faster than under OZ. Only downside perhaps, the verbose mode.

For unresolved issues:
- no internet nor RJ45 (Atheros AR8151), nor Wifi (Dlink DWA-121 Wireless N150 dongle),
- two usb3 ports missing - EJ168.

Is there a fairly easy way to inject the new kexts if needed into the OC environment?

Thank you for your contribution.
