

how to Install Macintosh into Lenovo Ideapad 500 15isk

Beitrag von „5T33Z0“ vom 30. November 2021, 16:19

[sagarshende](#) I recently updated Rehabmans Laptop Configs and added Quirks etc.

You could download the Config for 6th Gen Intel CPUs and corresponding iGPU and copy over Kernel Patches, Quirks and device Properties for the iGPU to the config of the previously posted EFI.

https://github.com/5T33Z0/Clov...p_Configs/6th_Gen_Skylake

And then you can upgrade Clover to the latest Version using this guide:

https://github.com/5T33Z0/Clov...e/tree/main/Update_Clover

Then you update the kexts using [Kext Updater](#)

And then you're prepared for Big Sur and Monterey Installation
