Hello,

I have exact motherboard. My CPU is Xeon E5 2689 with 32GB of RAM and a RX 480 4GB GPU.

I keep getting the kernel panic as in the picture provided below

Please check the attached EFI folder and give me suggestions to fix this issue 😞

Alles anzeigen

I have Huananzhi X79 and I have everything working. I have attached the EFI you can take a look. You will have to add your Patched DSDT (Don't use mine. **You can use it if you are using 6 Cores and 12 Thread cpu and chinese motherboard then you can use mine. If you are using more than 6 Cores and 12 Thread cpu then use the DSDT_ORALIA.aml included with the EFI** <https://www.hackintosh-forum.de/forum/thread/52137-huananzi-x79-dual-cpu-c602-board-ddr3-ram-hackintosh-monterey-12-0-windows-11-de/?postID=729266#post729266> and then edit it according to your cpu cores.

) Also use your SSDT-PM. Also generate new platform Info
