

# Opencore for Intel 11th generation

**Beitrag von „5T33Z0“ vom 5. Dezember 2021, 11:11**

[Macko](#) The latest version of OpenCore Auxiliary Tools contains config.plist template for building a base EFI Folder for Rocket Lake CPUs. But since your system does not have a discrete GPU it won't work oob.

You could try using a fake device-id for using a different framebuffer, like Comet Lake i9 (EB0609), though which has been reported working.
