

Sammelthread für BT Probleme unter Monterey

Beitrag von „Arkturus“ vom 5. Dezember 2021, 12:13

wie gehst Du vor, um das Script zu erstellen? Ich verwende Atom und das will nicht laufen. Findet keine USP-Ports. [marymade](#)

```
#!/bin/bash
# Script to find USB devices and their ports.
# Usage: ./find_usb_devices.sh

# Get the current directory
DIR=$(pwd)

# Create a directory for the results
RESULTS_DIR=$(mkdir -p $DIR/results)

# Function to get the list of USB devices
get_usb_devices() {
    IFS=$'\n'
    for device in $(lsusb -t); do
        echo $device
    done
}

# Function to get the list of USB ports
get_usb_ports() {
    IFS=$'\n'
    for device in $(lsusb -t); do
        echo $device
    done
}

# Main script
get_usb_devices >> $RESULTS_DIR/devices.txt
get_usb_ports >> $RESULTS_DIR/ports.txt
```
