

Problem with booting MacOs Monterey.

Beitrag von „oyku“ vom 11. Dezember 2021, 15:46

Hi. I've fixed graphical glitch by turning on Legacy Boot in Bios. At this point I could install Monterey but I saw AirportItl.kext is missing and it's necessary for Wi-Fi (I don't use ethernet). So I've downloaded and put that inside my kexts folder, and I've enabled AirportItl in the config.plist (it was there just false). I was surprised why did I got this error even tho It was enabled in the config. It says : OC: Plist Kexts\AirportItlwm.kext\Contents\Info.plist is missing for injected kext AirportItlwm.kext (AirportItwm)

Halting on critical error . Sorry for a problem I'm not rilly experienced about that.
