Both the DSDT are for 8 Core 16 Thread CPU

DSDT.aml (Only Modified CPU and Audio)

DSDTFULLYPATCHED.aml (Patched Audio, CPU, HPET, USBX, EC and other fixes) All the fixes that I already use.

I still meet the same panic. Please find in the attachment my EFI folders utilizing both of your DSDT files to see if I have configured anything wrong.

Hello,

I have exact motherboard. My CPU is Xeon E5 2689 with 32GB of RAM and a RX 480 4GB GPU.

I keep getting the kernel panic as in the picture provided below

Please check the attached EFI folder and give me suggestions to fix this issue 😞
