What happens when you use SSDT-PLUG, SSDT-PMC, SSDT-PM and SSDT-X79

CPU Power management just doesn't work. Frequency of all cores is stable at 2.6Ghz and Usage is always 100% no matter I let the PC idle or run geekbench test. All solutions I've tried so far giving the same result.

I expect it's idle at 1.2Ghz with almost 0% usage and reach 3.3 Ghz all core while testing with geekbench
