Problems with AMD Install

Beitrag von „fabiosun" vom 1. Januar 2022, 17:33

you should have to use EFI posted above

I have taken one posted previously and I have changed a few things in config.plist (kext order, a quirk)

Do not mix with your in OP

You have a 6c +6t CPU and previously you have had wrong patches for it

User helped you to have a proper EFI calibrated for your system
