

# Problems with AMD Install

Beitrag von „fabiosun“ vom 1. Januar 2022, 17:47

[Zitat von bvuiorgtfdsjnbs](#)

In this moment I'm from the phone it worked, but the graphics and all flake the screen and all black and every now and then it flashes before you could see correctly but the screen was all purple

in your config you have a Kernel/patch section

latest two could be useful for you (enable /disabled one of it)

Usually Algren ones is a bit secure and a bit lower in performance

Shaneee one has for some audio problems but a bit more in GPU Performance)

You have to try one at time and see
