the last clover 51r43 works 100% TOO

Heyy bro, i have downloaded your OpenCore EFI for my Dell Latitude e6420

I used Transmac to write macOS High Sierra into my usb, and copied your opencore EFI

but when i try to boot, it keeps stopping from here (photo attached) and then the stop sign appears (scrambled)

.

So i wonder if you're planning to upload your Clover EFI?

Opencore didn't work for me so... maybe Clover will work?

.

And can you show your [BIOS settings](#)?

.

Thank you so much!
