

# OC DELL Latitude E6420

Beitrag von „Mo-5590“ vom 9. Januar 2022, 10:38

before installing macos go to terminal

And use this command

```
csrutil status
```

If [SIP](#) is enable write this command

```
csrutil disable
```

The system will suggest to boot to do that operation. So boot it and install the macos and you will see that [SIP](#) apple is disable.

Good luck
