

Install Monterey/Big Sur on any X79 Motherboard Huananzhi Chinese gigabyte etc and PowerManagement

Beitrag von „robcodemax“ vom 19. Januar 2022, 14:05

Ok..Cool...Enjoy.

I started this mac project last November. I installed my Mac Monterey using your EFI and then once it got installed I started working on it to perfect the DSDT with help from Mald0n. Learned a lot after that. Now my Huananzhi X79 Deluxe Mac system is perfect.

I ll testing the HT DSDT later.

With Hyperthreading Enabled, the Performance is in some Applications on Windows like CyberPunk 2077 not so good. (Setting High with HT - 40 FPS/ without HT 70 -80 FPS)

Maybe some RGB light on the RAM or FANs will increase it 😊 Thats why HT is turned off in my system.

After the 12.2 Beta Update the Bug with Networkenvironment is fixed.

So everything is working for me. WoW i am still impressed.
