

Ist mein PC kompatibel?

Beitrag von „Hecatomb“ vom 19. Januar 2022, 22:05

hab hier was ausm Tomaten forum...darf ich leider nicht verlinken und werde selbst nicht ganz schlau draus. bezieht sich wohl auch auf Clover, aber vielleicht kann [apfel-baum](#) ja was damit anfangen?

Graphics

This is my card:<http://www.sapphire.tech.com/pr...AA0-EE54EE39ACD7&lang=eng>

- To get it working, first run Kext Utility. Then open Terminal and type

```
sudo nano /Systems/Library/Extensions/AMD8000Controller.kext/Contents/Info.plist
```

- Find this.

```
<key>IOPCIMatch</key>
```

```
<string>0x45001002 0x46001002 0x66401002 0x66411002 0x66461002 0x66471002  
0x66501002 0x66511002 0x665C1002 0x665D1002 0x67B01002 0x66401002</string>
```

- Add "0x066581002" among the strings. Exit, and hit Enter.

- Do the same for AMDRadeonX4000.kext

- If that still doesn't work, use Clover Configurator to add 0x66581002 to Fake ID under ATI. And Inject ATI.

- To test, play Chess. If you can make a move, then it's working.

- For some reason, my system recognises my card as "AMD Radeon HD 8xxx 2048MB". Doesn't matter. The graphics still works.
