

OC DELL Latitude E6420

Beitrag von „macwindows“ vom 24. Januar 2022, 20:29

I am sorry for asking help. I was trying to install Mac working version on Latitude E6420 that this discussion was. I tried to understand as best I can from the help provided by author and others. I am not too expert in the process and tried different things and learning. There was not any intention of using pirated version of the Mac.

If this has not followed the forum rules, I am sorry for that.

Have a nice day.
