

# Ist meine Hardware kompatibel zu Big Sur? (AMD A10, HD7770)

Beitrag von „Hecatomb“ vom 5. Februar 2022, 12:00

wie bist du auf das smbios iMac18,2 genau gekommen wenn ich das fragen darf?

## Info

For setting up the SMBIOS info, we'll use CorpNewt's [GenSMBIOS](#)

[\(opens new window\)](#) application.

For this example, we'll choose the MacPro7,1 SMBIOS but some SMBIOS play with certain GPUs better than others:

- MacPro7,1: AMD RX Polaris and newer
  - Note that MacPro7,1 is exclusive to macOS 10.15, Catalina and newer
- iMacPro1,1: NVIDIA Maxwell and Pascal or AMD RX Polaris and newer
  - Use if you need High Sierra or Mojave, otherwise use MacPro7,1
- iMac14,2: NVIDIA Maxwell and Pascal
  - Use if you get black screens on iMacPro1,1 after installing Web Drivers with an NVIDIA GPU
- MacPro6,1: AMD GCN GPUs

Run GenSMBIOS, pick option 1 for downloading MacSerial and Option 3 for selecting out SMBIOS. This will give us an output similar to the following:

Kann da nämlich nichts von diesem smbios lesen
