hi [macraq](#)

I would like to show you a couple of link:

If you check the dates you can see when it all began for me, before this I didn't even know how to use ubuntu..and I still have big difficulties in linux 😊

But it was the first lockdown due to covid 19 and i had some time to study

It actually started a little earlier, but I only published the guide after I had managed to get it to go on several platforms.

At that time in addition to Theresa with his videonovelas there were me and DSM2 who stressed the OpenCore devs to give us a hand even if they have always said that there would never be a direct support of AMD because of the "junk patches" useful to run OSX on those configurations.

About Gabriel:

I got to know Gabriel Luchina's github on this forum (Hackintosh-forum.de) when it was advertised in an app (OCAT) and had the developer correct the basic AMD configurations which were all wrong.

Particularly those related to sTRX4 that were identical to those of the previous threadrippers or

AM4 chipset, demonstrating the fact that people were talking and writing about things without having understood or tried them and subjectively interpreting in a bad way the indications of online guides.

As my rule of life I try to talk only about things that I can try for myself, especially if they are to be included in applications that even inexperienced users use to configure their PC.

For what you use when you propose a guide I can speak for me ..and in the links I posted at the beginning I always specify where and what I do

Even Teresa was a big boost with its exhausting and useless trafilata of videos dedicated to Proxmox without ever saying how if not subscribing to its patreon-

My only merit is to have saved several sTRX users from her greedy little hands :), publishing a not perfect guide and creating some videos to show it
