

# Legacy BIOS Problem with disk.

Beitrag von „Raptortosh“ vom 19. Februar 2022, 09:32

[Zitat von v1ta](#)

The fact is that there is no UEFI for my board.

You used ozmosis on your Z68, it Has UEFI, because ozmosis only works on UEFI motherboards. [Die Mac-Installation wird nicht gestartet.](#)

This means you should be able to use Uefi Boot on your motherboard (and also could use opencore).
