Legacy BIOS Problem with disk.

Beitrag von „v1ta" vom 19. Februar 2022, 13:11

theCurseOfHackintosh Um, I'm sorry, but you mixed up something. Where does it say that I used Ozmosis? I used clover on z68. A year ago I used Ozmosis on a z77. I just changed the configuration in the profile.

Dr. Moll Sorry, but I don't have UD3H, but UD5. And it makes no sense to install other firmware, because it will not work, I read on the forums. That's why there is no official firmware for ud5, or rather it was, but it was removed.
