

HP 250 G6 und OpenCore

Beitrag von „BknYop“ vom 27. Februar 2022, 05:17

Hey (sorry for using english, i don't know german)

I managed to fix sleep on this device, apparently it was because of the dGPU (Radeon 520) messing with the screen.

Using the "`-wegnoegpu`" flag disables the Radeon dGPU and fixes the issue.

Here's my EFI folder with Opencore 0.7.8 (remember to add your serial numbers)
