

# OpenCore -> Monterey -> Haswell funktioniert einfach nicht

Beitrag von „Hecatomb“ vom 13. März 2022, 16:18

iMac 17,1 für Haswell ? nimmt man doch normal für ein Skylake System? schau mal im guide...iwas kann da nicht stimmen !!!

## Info

For setting up the SMBIOS info, we'll use CorpNewt's [GenSMBIOS](#)

([opens new window](#)) application.

For this Haswell example, we chose the iMac15,1 SMBIOS. The typical breakdown is as follows:

<b>SMBIOS</b>	<b>Hardware</b>
iMac14,4	Haswell with only iGPU
iMac15,1	Haswell with dGPU
iMac16,2	Broadwell

**Note:** The following SMBIOS are only supported up-to macOS 11, Big Sur. For cases where you must boot Monterey, see below:

Monterey SMBIOS table

Note choosing a SMBIOS from the list below for Big Sur or older is not recommended, as Power Management and such can break when using unoptimized SMBIOS.

Monterey table:

<b>SMBIOS</b>	<b>Hardware</b>
iMac16,2	Broadwell with only iGPU
iMac17,1	Broadwell with dGPU

Run GenSMBIOS, pick option 1 for downloading MacSerial and Option 3 for selecting out SMBIOS. This will give us an output similar to the following:

Änder mal das SMBIOS falls du kein Monterey nimmst
