

AQ-107C unter macOS Monterey 12.3

Beitrag von „Warbands“ vom 21. März 2022, 06:08

The solution provided here worked great. I linked this forum post in a reddit post I made on r/hackintosh, crediting this forum for the solution.

I previously tried the latest unreleased OpenCore 0.8.0 with support for the new kernel quirk "ForceAquantiaEthernet". Sadly it caused repeating kernel panics for my system.

I will revisit it in the future, but for now, this solution was awesome, thanks everyone!
