

# Lenovo x280 Big Sur Probleme

Beitrag von „OSX-Einsteiger“ vom 23. März 2022, 19:41

Ich habe da was in der log gefunden firmware supports MATs

```
• EnableWriteProtector
• Another issue may be that macOS is conflicting with the write protection from CSO register, to resolve this we have 2 options:
  • If your firmware supports MATs(2018+ firmwares):
    • EnableWriteProtector => False
    • RebuildAppleMemoryMap -> True
    • SyncRuntimePermissions -> True
```
