

# Seit Update auf Monterey 12.3 Bootloop

Beitrag von „Hecatomb“ vom 31. März 2022, 05:25

Z390 - ASUS-Z390F

i9 9900k

5700XT

OC 0.5.8

Latest - Lilu 1.4.4 and Whatevergreen - 1.3.9

When clean install using 5700XT installer fails with crash.

[Installer Log 6-May-2020.txt](#)

**Removed pikera mod and used RX580 worked perfectly.**

After install switched out RX580 to 5700XT and re-added pikera. Runs fine.

<https://github.com/acidanthera/bugtracker/issues/901>

## **Important note for MSI Navi users:**

- Catalina (10.15) installers and under currently have a VBIOS bug which crashes installers if an MSI Navi card is present. This can be resolved by injecting `ATY,Rom#` in your GPU's DeviceProperties with any value. See here for more details: [Installer not working with 5700XT #901](#)

UPDATE: Versuch auch mal die efi in meinem Anhang. device property per SSDT gesetzt !!!!

AUCH MAL OHNE DEN PIKERA BOOTARG VERSUCHEN !!!!!!!!!!!!!!!!!!!!!!!
