

Mac OSX mit AMD Prozessor

Beitrag von „Hecatomb“ vom 9. April 2022, 23:24

Der Kext reicht normal, kannst aber auch beide nehmen, der andere ist für ein Tool das er bestimmt eh später nutzen mag

Please note that this release is at very initial stage of development, make sure you have a proper backup of your EFI folder and never run on any system that matters.

Installation

SMCAMDProcessor now comes in two separate binaries(kernel extensions):

- `AMDRyzenCPUPowerManagement.kext` for all power management features. This kext is also required if you would like to use **AMD Power Gadget**.
- `SMCAMDProcessor.kext` to publish readings to [VirtualSMC](#), which enables macOS applications like iStat to display sensor data. This kext depends on `AMDRyzenCPUPowerManagement.kext` to collect sensor data, thus must be loaded after.

1. Download the kext(s) and application from [Release](#) page

2. Add

`AMDRyzenCPUPowerManagement.kext` to
