

Mac OSX mit AMD Prozessor

Beitrag von „Hecatomb“ vom 11. April 2022, 22:41

The latest builds of Acidanthera's RestrictEvents also fixes AMD CPU names in About This Mac:

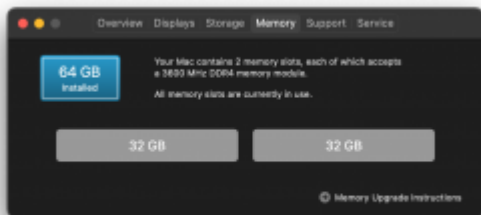

Required is just the latest build of the upcoming 1.0.2: RELEASE:

Builds

This also removes the need to map memory on MacPro7,1 SMBIOS:

Note

If your CPU is shown as Unknown on OC 0.6.7 or later try setting `ProcessorType` to 1537 for 6 cores or less and 3841 for 8 cores or higher in the config.plist under PlatformInfo > Generic.
