

# Mac OSX mit AMD Prozessor

Beitrag von „Heiko77“ vom 14. April 2022, 16:41

[Zitat von fabiosun](#)

I apologize to everyone in advance for the little off topic ..

Today, patching apps that don't work due to some intel libraries is much easier than in the past.

There is a script that helps us automatically:

[link to AMDFriend's script](#)

to know more you can also consult this thread:

[about MKL and fastmem problematic libraries for AMD](#)

Alles anzeigen

Thank you for the information.

As I said it's about one and a half year ago, since I used a Ryzentosh. I switched to Intel because of more compatibility. But it's great that this process is automated.
