

Installation mit oder ohne zusätzliche Hardware

Beitrag von „apfel-baum“ vom 28. April 2022, 19:26

was bei der erstellung der efi wichtig ist, damit die ethernet-onboard-netzwerkkarte funktioniert- siehe dortguide- <https://dortania.github.io/Ope...uide/extras/monterey.html>

Ethernet

Intel I211 chipset (typical for some AMD boards i.e. B450) no longer works with SmallTreeIntel82576 kext (network remains in Cable Unplugged status).

[AppleIGB](#)

[\(opens new window\)](#) might work on some systems but it has a known issue to drop connections (primarily after wake-up).

See the below issues for more details:

- [Kext no longer working with MacOS 12.0](#)
[\(opens new window\)](#)

The boot-arg for enabling Intel I225-V ethernet controller has changed since macOS Monterey 12.3. Use `e1000=0` instead of `dk.e1000=0`
