I updated it a bit with UBU, otherwise:
NVME module from Win-Raid Forum used.

FileSystem -> EnhancedFat (faster fat access).

IMPORTANT: Save the old BIOS with the BIOS programmer!!! Flash the BIOS either with
Programmer / Windows / FPT...

The _Files file contains everything that was used...

Hello and sorry for resurrecting this thread but I am also in need of some help regarding the
P8H77-M nvme modded bios.

I see you modded the P8H77-M Pro version, does it also work on P8H77-M non pro ?
