

macOS 13 VENTURA beta

Beitrag von „grecedrummer“ vom 7. Juni 2022, 09:30

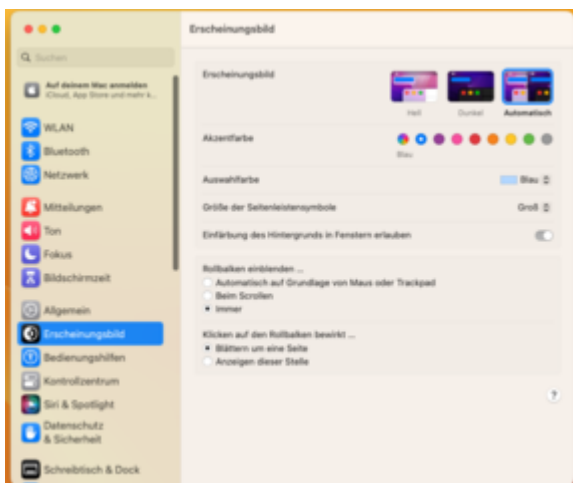

Vorsicht!

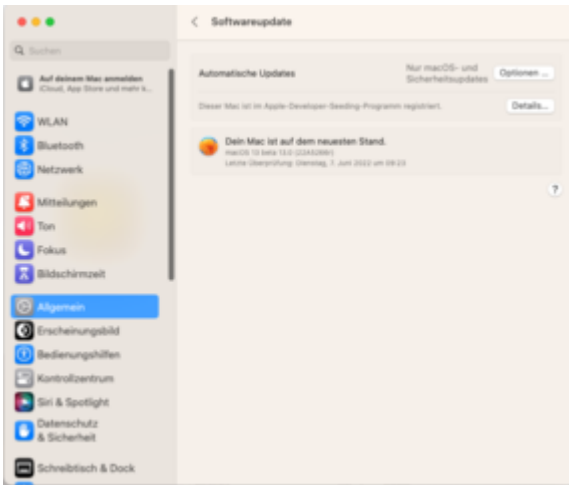

Für Ventura macOS13 habe ich komplett neues USB BootStick erstellt.

Mit diesen settings ladet kein Monterey macOS12!

Beta eben ... auf separate Partition installiert, EFI beigefügt

ControllCenter sieht schrecklich aus 🤢 (wieder mal Gewöhnungsgeschichte ...)

Musste [OC 0.8.2](#), alle Kexte neu laden

bei iMacPro1,1 funktioniert **nicht** WEG -agdpm0d=pikera folglich nur ein Monitor auf RX 5700

bei MacPro7,1 ohne WEG beide Monitore

Name	Typ	Hersteller	Steuerung
Apple Card Reader	USB Controller	Apple	AppleUSBXHCI
Apple Keyboard	IOKit Device	Apple	AppleKeyboard
Apple Mouse	IOKit Device	Apple	AppleMouse
Apple Trackpad	IOKit Device	Apple	AppleTrackpad

[AppleALC](#) neu runter laden dann klappt´s

Nur über Blechlautsprecher Monitor oder Blauzahn

iStat Menus

auch neue VirtualSMC und Installation von [Intel® Power Gadget](#) keine Anzeige von Temps auf MacPro7,1

Naja noch nicht mein Ding...
