

macOS 13 VENTURA beta

Beitrag von „fabiosun“ vom 7. Juni 2022, 21:52

[Zitat von Hecatomb](#)

[fabiosun](#) i Test it in one hour. Thanks for the info

remember boot arg -lilubetaall

I have forgotten it in previous message list

It is also possible to leave on Dummy Powermanagement in Kernel/Emulate...but here it should be better to read open core documentation

(my rig works the same with it on or off)
