

# macOS 13 VENTURA beta

**Beitrag von „fabiosun“ vom 14. Juni 2022, 17:53**

Have any AMD CPUs users managed to get Clover to run with macOS Ventura?

or should we wait for a more "complete and clean OC snapshot"?

I know this bootloader isn't used much by AMD users, but I was curious to see if it worked

Tested on my rig with no success and with Nvram error after to have used it

Then, to have OpenCore boot loader working well again I have had to reset my CMOS).

thank you
