

Opencore Installation auf Z690 Gaming X DDR4

Beitrag von „Muzman“ vom 5. Juli 2022, 13:04

Hi, [icecloud](#) ! Your EFI OC-0.79 perfectly matched my almost similar hardware.

My Hackintosh has worked perfectly. There is already a new OpenCore 0.82.

Please update and post us a new EFI. He will install and work with macOS Ventura.

Thank you very much dear friend !!!

My computer hardware: Gigabyte Z690 Gaming X DDR4; CPU : Intel Core i7-12700F; GPU : Radeon RX 5700XT 8GB; Mem : 32 GB DDR4 3000 4x 8GB; SSD M2: OSX12 / OSX13; SSD M2: WIN11; Case: Big Cooler Master with 1200 watt power supply.
