I'm not able to provide you with an updated EFI.

As others in the forum already stated it's only some mouseclicks with OCAT and you have a the new 0,82 EFI.

If you have difficulties with the new EFI please help will be available from me or others in this forum.

By the way:

Hackintosh forum user greecedrummer has already an updated EFI (see Hardware section of this forum) (0.82. Beta I assume)
