macOS 13 VENTURA beta

Beitrag von „fabiosun" vom 8. Juli 2022, 16:45

Your platform should have the need of one of those quirks

I havent seen a your IOREG so i cant say if both or one of them

it is weird if your system was working well without them in previous OSXs

In that case only an OpenCore and kexts update should help to boot also in beta 3
