

# amd ryzen 3 2200g hackintosh

**Beitrag von „fabiosun“ vom 13. Juli 2022, 08:14**

a small premise:

I don't recommend wasting so much time on your desktop system if you don't plan on adding at least one supported GPU to it, even a very cheap one.

Below is a complete EFI that you can try to use from High Sierra to Big Sur latest version

You can try to use this EFI either with a full USB OSX installer or on a clone of an OSX running on another PC copied to your machine

I repeat myself and I'm sorry for that, it's not worth it without a compatible GPU, and even with a compatible GPU your system may have serious audio sync issues
