I think i am a little stupid.

I do not think so if you have a working hackintosh 😊

[Zitat von tackerjim](#)

Can you explain me what i have exactly to do? Beause i didn` t found a one click solution...

there is not so much to explain:

- 1) vanilla Suite installation
- 2) do not delete or run old methods
- 3) this command for photoshop:

Code

1. amdfriend --in-place --sign --directories /Applications/Adobe\ Photoshop\ 2022

In AMDFriend github you will find instructions to download this script

In link i have sent in this thread you will find also an Historical "story" how this method is born

**note:**

***this is not a "crack" for pirating a app***

it is only a simple way to have all software using intel MKL library working also in AMD osx pc
