

Ryzentosh - Auros B550i PRO AX - "3,6GHz Unbekannt" fix ?

Beitrag von „fabiosun“ vom 8. August 2022, 18:39

[user1](#) a thing to check could be lilu and RestrictEvents kexts version

Then when you are sure about the right combination from Lulu/RestrictEvents/Opencore, you can use revcpu parameters in NVRAM to change CPU's name as you like:

4D1FDA02-38C7-4AEA-9008-4BCCAB30102	Dictionary	3	fabiosun posts
revcpu	Number	1	
revcpuName	String	1	Beautiful CPU in the World! :)
revManufacturer	Name	0	fabiosun
