

# macOS Ventura: magic number doesn't match

Beitrag von „Hecatomb“ vom 16. August 2022, 16:44

schick mal die efi.

hab da auch was falsch wiedergegeben ...

war was mit mehrmals booten.

after debugging quite a bit I think I seem to know the right order to follow:

1. Clear CMOS/take plug out for a bit so system resets
2. Boot into MacOS using OC FIRST
3. Shutdown
4. Boot into Windows using OC
5. Shutdown
6. Boot into Windows normally
7. Shutdown

Doing so seems to keep bluetooth working however if macos goes to sleep, you need to use the command "sudo pkill bluetoothd" in terminal to make BT work again.
