

Bitte bewertet mein Build! 1500€ - 2000€ Hackintosh Workstation / Windows 11 Gaming Setup + Mac als VM mit GPU Passthrough als Lösung?

Beitrag von „fabiosun“ vom 24. August 2022, 16:49

"Software like the Adobe Suite if I use Intel CPU?"

no need of patches for Adobe suite with intel CPU

"Do you think my mainboard will work well with both "Bare Metal" and VM ? And would you recommend using an external WiFi adapter or is it not that complicated to get Wifi working directly on my motherboard?"

Yes for first question

I use a Fenvi t919 seen out of the box without the need of any kext

For the others doubt see my signature 😊

it up to you how many time you would like to spend in this project (and please do not pay for it..here and on google you will find all solutions)

Better to use additional money to add hardware and doing a little donation to the forum (just in case) 😊
