hi tommy, sorry i only speak english, did the efi work with the monterey build, i have the same laptop except its has an i5 8365U and only 8Gb LPDDR3 of ram, trying to install monterey too

Edited once, last by [UnholyAnas](#): edit: booted monterey, current issues are : sleep, HDMI, headphone jack (4 hours ago).

Hi,

Did the sleep work on Big Sur? What happens when it wakes up from sleep? Does your Fn6 and Fn7 for brightness work? I think that was causing the sleep to break. I am booting from Monterey too.
