

macOS Ventura Install Help

Beitrag von „fabiosun“ vom 2. September 2022, 12:17

[azrailkenan](#) hi

your EFI is old in mandatory kext as AMD Ryzen CPU Power Management and SMC AMD Processor

also other things must be updated

I have disabled some kext and update OpenCore to 083 (useful for Ventura)

if you like you can try it and see if you can do some steps more
