

macOS Ventura Install Help

Beitrag von „azrailkenan“ vom 2. September 2022, 16:05

[Zitat von fabiosun](#)

this one is completely new one and not an update of your posted in originate post

check if you have in your Bios 4G on and CSM off

this a problem for some ethernet in Ventura OSX no more supported

and why you put in CPU kernel patches 08 instead of 06?

if you have a 3600x it has 6 cores or your signature is not updated and you have a 3800x?

added a config of a 6 cores CPU

Alles anzeigen

The system in my signature is the real one.

I found the EFI file I installed on a site on the internet, this was the only EFI file that was installed in monterey, but M.2 does not see SSDs, but I could not proceed with the installation with any EFI file in Ventura.

I'm not a hackintosh expert, I'm a computer hardware master. However, I want to install the macOS system on the HI-LEVEL 120GB SSD in my signature and learn in detail, if I learn how to use it, I want to switch to macOS completely.
