

# Amd Ryzen 7 3700x / GTX 1070 Support

Beitrag von „fabiosun“ vom 4. September 2022, 15:48

Web drivers for your nvidia gpu are written till highsierra as said by [apfel-baum](#)

So to have a good OS X experience you can't install newer OS X than high Sierra

It is a ryzen with 8 cores not a threadripper

You could use OCAT up to build an initial minimal Efi to try to install High Sierra

it is also possible to use clover bootloader if you download proper patches from AMD OS X vanilla clover GitHub

But, learning Opencore is better
